

Ajay Kumar Pandey

Senior Software Engineer | Java · Spring Boot · Kafka · Microservices

+91-6392363003 | rightmajay@gmail.com | linkedin.com/in/rightmajay | github.com/rightmajay

ABOUT

Backend engineer with **7+ years** of experience, mostly in Java and Spring Boot. I've spent a good chunk of that time on Kafka pipelines, change-data-capture systems, and keeping distributed services reliable when things go wrong in production. I've led a small team, owned systems end to end, and worked across healthcare, e-commerce, and enterprise projects.

WORK EXPERIENCE

e.Soft Technologies

Oct 2021 – Present

Software Development Engineer

Mumbai, India

- Built a **CDC pipeline** with Debezium, Kafka Connect, and Spring Boot to keep data in sync across services in near real time.
- Added wildcard search across **Elasticsearch** and MongoDB, making it easier to search flexibly across millions of records.
- Led the **Spring Boot upgrade** from 2.x to 3.3 across the microservices — cleaned up deprecated APIs and rolled it out without downtime.
- Owned the **Audit pipeline** end to end, chasing down connector failures, memory leaks, and Kafka slowdowns that only showed up under real production load.
- Traced a string of **504 gateway errors** back to a misconfigured connection pool and got the affected services back within SLA.
- Ran point as **Scrum Lead** for a 6-person team and mentored a couple of junior developers through code reviews.
- Added Elasticsearch to the Catalog service from scratch, which cut search latency by about **25%**.
- Reworked the **Order and Checkout** retry logic after payment failures kept creeping up, which brought the failure rate down noticeably.
- Added **Resilience4j** circuit breakers between services and used distributed tracing to find slow spots faster when something broke.
- Used Java's concurrency tools (**ExecutorService**, thread pools, **CompletableFuture**) to run batch jobs in parallel instead of one at a time.

Osizone Services Pvt. Ltd

Jun 2019 – Aug 2021

Software Developer

Noida, India

- Built **REST APIs** in Java and Spring Boot for the core parts of the Aarogyam healthcare platform — patient sign-up, appointments, medical records.
- Designed the MySQL schema for patient and clinical data, with indexing and query tuning as the user base grew.
- Set up **role-based access** with Spring Security so doctors, patients, and admin staff each saw only what they needed to.
- Hooked up third-party APIs for lab reports, pharmacy, and SMS/email alerts, which cut down a lot of manual follow-up work.
- Handled several production releases start to finish, usually under a tight Agile sprint schedule.

SKILLS

Languages: Java (primary), JavaScript, SQL

Java Core: Concurrency (ExecutorService, Thread Pools, CompletableFuture), Streams API, Collections

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Cloud, Hibernate, RESTful API

Resilience & Observability Patterns: Resilience4j (Circuit Breaker), Distributed Tracing (Zipkin, Jaeger, OpenTelemetry)

Messaging & Streaming: Apache Kafka, Debezium, Kafka Connect, RabbitMQ

Databases: MySQL, PostgreSQL, MongoDB, Redis

Search: Elasticsearch (full-text, wildcard, aggregations)

Blockchain: Avalanche (AVAX), NFT tokenization, smart-contract-backed collateralization

Cloud & Infrastructure: AWS (EC2, S3, SQS), Azure (VM, Blob Storage), Docker, Kubernetes

DevOps & CI/CD: Jenkins, GitHub Actions, Gradle, SonarQube, HashiCorp Vault, ArgoCD, Terraform, NGINX

Observability: Kibana, CloudWatch, ELK Stack, New Relic

Testing: JUnit, Mockito, JMeter

AI & Productivity: GitHub Copilot, Microsoft 365 Copilot, AI-assisted Code Reviews

Tools: IntelliJ IDEA, Postman, JIRA, Confluence, Bitbucket, Git, MongoDB Compass

KEY PROJECTS (E.SOFT TECHNOLOGIES)

Aryadhan – Commodity-Backed Lending on Blockchain

Feb 2025 – Present

Java, Spring Boot, Kafka, Avalanche (AVAX), NFT, REST API

e.Soft Technologies

- Designed a lending platform where commodities sitting in a warehouse get turned into **NFT tokens**, which partner banks like Arya Bank can lend against.
- Built two internal services — a **Blockchain Gateway** and a Finternet Adapter — in Java, Spring Boot, and Kafka to connect banking systems to the blockchain side.
- Used **Avalanche (AVAX)** as the underlying chain for minting tokens and verifying collateral through smart contracts.

- Wired up Kafka event flows between the banks and the gateway for loan requests, collateral checks, and payment confirmations.
- iPulse – Clinic Management Platform** Jan 2025 – Present
Java, Spring Boot, Spring Security, Kafka, MySQL, Redis, Docker, REST API, JWT *e.Soft Technologies*
- Built a clinic management platform in Java and Spring Boot covering registration, scheduling, prescriptions, and billing.
 - Set up a **Kafka pipeline** for clinic notifications — reminders, prescription updates, billing alerts — delivered reliably across services.
 - Added role-based access with Spring Security for admins, doctors, nurses, and patients.
 - Built a scheduling engine that catches double-bookings and reschedules automatically when someone cancels.
 - Added **Redis caching** for doctor schedules and patient lookups, which noticeably sped up response times.

- StaffWorks – Employee Management Platform** Nov 2024 – Jul 2025
Java, Spring Boot, Spring Cloud, Spring Security, MongoDB, RabbitMQ, Docker, Kubernetes, Redis, JWT *e.Soft Technologies*
- Split a single monolithic employee system into separate **Spring Boot** services for employee data, scheduling, and payroll.
 - Built cross-service JWT auth with Spring Security, plus API routing and rate limiting through Spring Cloud Gateway.
 - Moved payroll communication onto **RabbitMQ** events with dead-letter queues so nothing important got dropped.
 - Added MongoDB read replicas with better indexing, which stopped a lot of the timeout issues on cross-service reports.
 - Containerized everything with Docker and ran it on Kubernetes so it could scale up during busy periods.

- CareHudl – Healthcare Platform (HIPAA-Aligned)** May 2023 – Dec 2023
Java, Spring Boot, Spring Security, Kafka, MongoDB Atlas, Docker Swarm, Terraform, Twilio, Redis, NGINX *e.Soft Technologies*
- Built a healthcare backend in Java and Spring Boot, designed around **HIPAA-style** rules for handling patient data.
 - Encrypted sensitive patient fields at the field level and built appointment scheduling that held up under concurrent booking attempts.
 - Used **Kafka event sourcing** to keep an audit trail of who accessed patient data and when.
 - Built a pipeline for processing large medical image files (200MB+ DICOM) without blowing up memory.
 - Set up infrastructure with Terraform on Docker Swarm, and added Twilio for telemedicine on low-bandwidth connections.

ACHIEVEMENTS

- Employee of the Year** ×2
e.Soft Technologies — recognised for backend delivery impact and team mentorship
- Stack Overflow**
1,008 reputation · 14 badges · 335-day streak

EDUCATION

- Mahatma Gandhi Kashi Vidyapith** Varanasi, India
Bachelor of Computer Applications (BCA) *Feb 2016 – May 2019*
