ABOUT

Full stack developer with **7+ years** of experience, mostly on the MERN stack and Next.js. Over the last couple of years I've spent a lot of time wiring AI (OpenAI and Claude APIs, RAG pipelines) into real production products across healthcare, legal-tech, and e-commerce. I've built a few platforms solo from the ground up, and also led a small team on a client SaaS product.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Node.js, HTML5, CSS3, SQL

Frontend: React.js, Next.js 14, Redux, Context API, TailwindCSS, Material-UI, SSR/SSG

Backend: Express.js, NestJS, RESTful APIs, GraphQL, Socket.io, WebSocket, BullMQ

Databases: MongoDB, PostgreSQL, MySQL, Redis, Prisma ORM

AI & GenAI: OpenAI GPT-4, Anthropic Claude API, RAG Architecture, Vector Databases, Embeddings

Auth & Security: NextAuth.js, JWT, RBAC, MFA (TOTP), bcrypt, Helmet, CORS, Rate Limiting

System Design: Multi-Tenant Architecture, API Design, Event-Driven Patterns, Service Separation

Blockchain: Avalanche (AVAX), NFT Tokenization, Smart-Contract-Backed Collateralization

Cloud & DevOps: AWS (EC2, S3, Lambda, CloudFront), Azure (App Service, Blob, PostgreSQL), Docker, GitHub Actions (CI/CD pipelines), Nginx

Testing & Quality: Jest, React Testing Library, ESLint, Prettier, Sentry

WORK EXPERIENCE

e.Soft Technologies

Oct 2021 – Present

Senior Full Stack Developer

Mumbai, India

- Owned the architecture and delivery of **RealEstAi**, a multi-tenant legal SaaS for Alberta lawyers, built on Next.js 14 and deployed to Azure with CI/CD.
- Built an AI document pipeline (GPT-4 and Claude) that pulls structured data out of legal PDFs and generates firm-branded documents automatically — cut a lot of the manual drafting work.
- Also worked on **FixAi**, an AI home-maintenance platform, using a RAG pipeline over a vector database for context-aware appliance troubleshooting.
- Delivered **CareHudl**, a healthcare staffing platform with AI-based shift matching and credential verification.
- Led the **Elynker** MSME platform as team lead for 4 developers — ran client calls and sprint planning while also building the microsite and catalog tooling myself.
- Mentored 4 junior developers through code reviews, which helped bring production bug rates down over time.
- Set up role-based access with 22 permission levels on **NextAuth.js v5**, including TOTP MFA and audit logging.
- Tuned the Next.js SSR/SSG setup on SEO-heavy pages, getting Lighthouse scores into the 90s.

Osizone Services Pvt. Ltd

Jun 2019 – Aug 2021

Software Developer

Noida, India

- Sole developer on **Adroit**, an ed-tech platform for course monetization, with HLS live streaming, auto-recording, and DRM-protected delivery through S3/CloudFront.
- Hooked up **Razorpay** and **Stripe** for course access, handling both one-time purchases and subscriptions.
- Built the video transcoding pipeline — multiple quality levels, CDN cache invalidation, and per-user access control enforced at the API layer.
- Sole developer on **Arogyam**, a healthcare e-commerce platform with multi-vendor medicine ordering and prescription upload with pharmacist verification.

KEY PROJECTS

RapidGST – GST Compliance SaaS

Oct 2022 – Present

Next.js, Redux Toolkit, Prisma, BullMQ, MongoDB, AWS

e.Soft Technologies – Team of 4-6

- Worked as a core contributor on a 4-6 person team building GST filing automation for **Amazon, Flipkart, and Meesho** sellers.
- Built the core business logic that reads invoices from each marketplace, pulls the right fields out of different column layouts, and validates **HSN codes**, state codes, and GST numbers on the fly — filings built on this logic have gone through the GST portal with **zero rejections**.
- Built the APIs for this and wired them to **BullMQ**, so once a request came in, processing kept running in the background even if the user refreshed the page or lost their connection.
- Handled concurrency so multiple invoices could be validated and processed at the same time without conflicts.
- Wrote the **Prisma** queries for storing and reading this data, and built the Next.js frontend for this part — components, Redux Toolkit for state, and the SEO work on those pages.

Aryadhan – Commodity-Backed Lending on Blockchain

Feb 2025 – Present

Node.js, Express.js, BullMQ, MongoDB, Avalanche (AVAX), NFT, Webhooks, REST API

e.Soft Technologies – Team of 7+

- Worked on a 7+ person cross-functional team building a lending platform where warehouse-stored commodities back the loan — now onboarded with **4 partner banks**.
- Built the **Finternet Gateway** and its APIs, responsible for pulling data from the Aryadhan system and pushing it onto the blockchain network.
- Handled **wallet creation**, NFT minting, and pledging/burning of tokens as loans were issued and settled through the platform.
- Built **webhooks** from the Finternet side so partner banks and other players got notified automatically as things happened on-chain.

StaffWorks – Workforce Scheduling Platform

Oct 2021 – Feb 2023

MERN, Socket.io, WebRTC, Geofencing, Redis, Docker

e.Soft Technologies – Team of 4-6

- Worked as part of a 4-6 person team building a workforce scheduling platform with real-time **geofencing** (Socket.io) for automatic clock-in/out by proximity.
- Added **WebRTC** in-app voice calls so managers and field staff could talk directly without leaving the app.
- Built the role-based access system with a full audit trail so admins could see exactly who changed what and when.

ACHIEVEMENTS

2 Production Applications Built Solo

Adroit and Arogyam – full ownership from architecture through deployment

Led a Team of 4

Elynker MSME platform — sprint planning, client calls, and technical delivery

AI in Production

GPT-4 and Claude powering document processing and RAG-based conversations in live client products

EDUCATION

Mahatma Gandhi Kashi Vidyapith

Varanasi, India

Bachelor of Computer Applications (BCA)

Feb 2016 – May 2019
